The European Digital Services Hackathon

CloudOpting, [1] a European marketplace for digital public services, is aiming to provide the catalyst for enabling and supporting the plethora of benefits of Cloud computing for the public sector. CloudOpting is a Cloud-based platform that enables governments and businesses to procure and deliver digital public services in a seamless manner. The Cloud platform will comprise of a Cloud infrastructure and tools that will assist public administrations in flexibly and effectively migrating their services to the Cloud.

As the CloudOpting platform is already in place, we want to provide you with the opportunity to explore our cloud platform and to engage with our business model which enables providers and local authorities to sell and subscribe to services from across Europe through a series of Hackathons.

The hackathons are for Public Service Providers that want to increase the visibility of their applications and services in a European Marketplace through migrating their services to a single digital store. They will also provide Public Administration (Service Subscribers) with a new insight into Cloud based computing.

The purpose of the hackathon is to increase the applications available in the marketplace, validate the platform and the business model, and to receive feedback from potential customers and providers of CloudOpting. Furthermore, the aim is to increase and spread the knowledge of the business opportunities of this new Public Marketplace.

This Hackathon is the first opportunity to join together and deliver a Single European Market for Public Services.

The Hackathon will be held in three different countries and organised for two different days:

The Technical Day:

- VITA Entrepreneurship Center, Sant Cugat del Valles (Spain): 2nd November, 2016.
- Corby Business Enterprise Centre, Corby (UK): 9th November, 2016.
- NetPort Science Park, Karlshamn (Sweden): 23rd November, 2016.

Networking Day:

- VITA Entrepreneurship Center, Corby Business Enterprise Centre and NetPort Science Park together: 1st December, 2016.

CloudOpting is a three-year Project accomplished by a pan-European consortium of 10 partners and is co-funded by the EU ICT Policy Support Programme (ICT PSP) under the Competitiveness and Innovation Framework Programme (CIP). Three European cities and one region will pilot the experiments developed under the CloudOpting project: Barcelona, Karlshamm, Corby and Piedmont. The project partners are: Barcelona City Council, Teamnet, Wellness Telecom, ATOS Worldline, SDG Group, Smart Partners, CSI-Piemonte, Profesia, Electric Corby and NetPort.
